Bringing the Epsilon advantage to ERM

Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential. V0324

Retail Media – vision & principles

Make retail media easy to buy, measure, and scale – powered by Epsilon identity and connected across every retailer and channel.

Guiding principles

Engage real shoppers
With the person-first identity of COREid, treat each retailer's shopper like an individual

Meet advertisers where they are
Be flexible in how brands buy, measure, and grow their monetization programs

Transparent, closed-loop reporting
Connect every interaction with an online or in-store purchase

Frictionless activation
Make retail media easy to buy, scale, and optimize.

Research & Discovery

14 Interviews conducted across the Epsilon RMN Business

PROBLEM

Identity Everywhere is not just a foundational capability it is a strategic lever **to unlock advanced platform capabilities** such as personalisation, omni-channel attribution, and global monetisation.

Today, identity adoption is fragmented, limiting our ability to deliver unified measurement and enriched experiences. Without broad adoption, **we cannot fully activate the next wave of capabilities** that differentiate our platform and drive revenue growth.

Rolling out **identity adoption in parallel with our current capability development** ensures we are set up for the future protecting current revenue streams while enabling advanced features that strengthen retailer partnerships and accelerate global expansion.

Failure to prioritise identity as an enabler risks slowing innovation, weakening GTM narratives, and leaving monetisation opportunities untapped.

Discovery

- Why Identity Everywhere matters
- Strategic imperative for future growth
- Core focus areas driving adoption and capability unlock

OPPORTUNITY

To support CoreID expansion and Epsilon tag adoption, we need to uncover retailer pain points, readiness, and perceived value of identity-driven solutions. This will inform GTM strategy and integration priorities.

Current Impact

- Only 9 out of 101 retailers (10%) have implemented tagging and DTM token reporting
- Identity everywhere is a key strategic pillar is not being realised
- Measurement, personalisation, and connected commerce media network goals are compromised

Recent discovery insights have revealed strong emerging patterns across 5 key focus areas that could potentially unlock adoption in 2026

Value Proposition Clarity | Contractual Enablement | Measurement & Enrichment | Proof Points & ROI | Regional Prioritisation

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

Emerging Top 3 Themes

Reframing Identity is the means, not the end - CoreID should be positioned as an enabler of growth outcomes *(net-new reach, offsite activation, closed-loop measurement)* NOT as a product to adopt "because it's better."

Should we push CoreID everywhere? NO | Prioritise Markets & Retailers where CoreID unlocks material revenue

We should push **value** everywhere and CoreID wherever value requires persistence offsite and cross-channel use cases

Prioritise markets/retailers where the revenue case is strong, the signals are available or attainable, compliance is feasible and GTM can credibly land with proof points

To unlock adoption we need to strengthen our value proposition, standardise contractual requirements, improve operational processes & provide clear visibility into tagging status across all retailers

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

2026 Identity Everywhere Journey

RFP & Onboarding	Matching & Enrichment	Expanding Adoption	Reach New Audiences
Increase Adoption	Increase Match Rate	Expand into Emerging Markets	Reach Audiences beyond RMN

INITIATIVES

RFP & Onboarding

- Universal Value Proposition & GTM Enablement
- Contractual & Compliance Standardisation & Simplification
- RFP Identity Checklist
- Integration Playbook for Emerging Markets

Matching & Enrichment

- Identity Conditioning & Enrichment Playbook
- Historical Conditioning & Enrichment of Events
- Identity Coverage
- Launch Identity Coverage Dashboards

To further validate

Expanding Adoption

- 2 Pilot Retailers
- Global Best Practices & Shared Services Model
- Proof Points & ROI Models

Reach New Audiences

- Expand Publisher Partnerships
- Partner shortlist per region
- Integrate 2–3 partners

RFP & Onboarding

- % new onboardings with FPC enabled
- % contracts updated with DPAs
- Higher onboarding rates in Emerging & Mid Markets - APAC/EU

Matching & Enrichment

- Match rate improvement (online + offline)
- % of enriched profiles
- Increase in campaign ROAS
- Adoption acceleration post-proof points

Expanding Adoption

- Dashboard Ddoption:100% of priority retailers
- x% of pilot retailers achieving "CoreID Ready" within x Months

Reach New Audiences

- Net-new reach – X% audience expansion

A repeatable, privacy-first matching & enrichment engine that proves identity-driven **incremental revenue** and **coverage resilience**, de-risks emerging market expansion, and accelerates CoreID adoption where it truly **moves the needle**

Identity Progressive Pathway

EMERGING MARKETS

Prove **Progressive Identity Value** *(Session → Customer → CoreID)* through Bronze-Silver-Gold Badges with 1-2 Anchor Retailers in an Emerging Market. Turns identity from a "black box" into a measurable, client-facing asset. Exposing the growth of a client's identified universe over time.

	ONSITE FIRST IDENTITY	EXTENSION & ENRICHMENT	UNIFIED & OMNICHANNEL
	Establish a reliable foundation using what the retailer already owns	Increase scale and continuity without losing determinism	Enable full-funnel, omnichannel activation and measurement
Identity	**Browsing Data:** Contextual + Session Signals (session ID + basic events)	**Persistent ID**: Deterministic joins (cookies, login, hashed email/phone)	**Persistent CoreID**
Type	Contextual Delivery	Customer ID	**Cross Device/Channel Activation** (onsite + offsite + in-store)
Integration	No Tagging	Tagging with Customer ID	Tagging + Offline Transaction Files
Measurement	Basic Measurement	Simple Attribution + Historical Stitching	Full-Funnel Attribution
★ Partnerships	Identity Enrichment via Partners	Identity Enrichment via Partners	Identity Enrichment via Partners
★ Publishers	Access to Publisher Networks	Access to Publisher Networks	Access to Publisher Networks
★ Cleanroom	**Mid-Market** (usage-based or shared-tenant configurations)	**Mid-Market** (usage-based or shared-tenant configurations)	**Mid-Market** (usage-based or shared-tenant configurations)
★ Proof Point	**Evidence Engine**	**Evidence Engine**	**Evidence Engine**

Dashboard

Dashboard

The Evidence Engine

EMERGING MARKETS

Tracking real-time visualisation (***Client Facing Dashboard***) of identity graph growth, match rates & enrichment over time.

Turns Identity from a "Black Box" into a Measurable Asset

Builds Trust & Reduces Risk Perception

Accelerates Adoption

Supports GTM Strategy

1. Retailers will be more willing to share data and progress through onboarding tiers *(Identity Progressive Pathway)*
2. Integration timelines will shorten because legal and compliance concerns are mitigated by transparency
3. Emerging markets will see higher CoreID penetration and Epsilon tag adoption

Trust Roadshow + Identity Academy

EMERGING MARKETS

- ✓ 60-minute sessions; translated materials; live Q&A
- ✓ Role-based internal training tracks (Sales, Onboarding, Legal, PMM)
- ✓ Live Office Hours

Key Benefits

1. Education is the #1 lever for adoption
2. Many teams lack clarity on how to position identity value, leading to inconsistent messaging and missed opportunities
3. Education isn't just for clients—it's critical internally
4. Education beats avoidance—legal, sales, and client teams perform best when trained on a simple, repeatable explainer

Launch a Modular Enablement Series

- ✓ Identity 101: From Identification to Addressability
- ✓ From Bronze to Retail Media: *Why bronze isn't enough*
- ✓ Privacy-by-Design in Practice
- ✓ Proof Points: The Evidence Engine

Create Role-Based Cheat Sheets

- ✓ For BD, RBO & CSM with objection handling
- ✓ Region-specific talking points

Localising Identity in Emerging Markets

To establish a clear, local & commercially powerful identity capability across Emerging Markets by equipping teams with the assets, narratives, & skills to confidently connect retailer data to privacy-safe, outcome-driven onsite and offsite activation

Localised Value Story & Assets

Make AU/APAC identity value prop obvious, visual, and safe; remove US-centric stats

Retail Media Specific Identity Pitching (Onsite → Offsite)

Help CS & Sales extend strong onsite stories into offsite safely and simply

Structured Identity Enablement for APAC Teams

Shift from ad hoc learning to a repeatable program with clear language and tools

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

Ecosystem-as-Product: Simple, Human, Outcome-led

EMERGING MARKETS

GTM must sell a connected workflow not discrete tools.

Lead with Outcomes

"More revenue, better measurement, clearer audiences."

De-jargon the Value

"COREid recognises real shoppers, not just devices."

Anchor the Enabler

"Identity is how we deliver revenue—not the thing you buy."

Tie Product, GTM & Partnerships into 1 Story

"Connecting this narrative will accelerate adoption"

Epsilon
Retail Media

Let's Break it Down

Devil is in the details...

1. Discovery Insights

Accelerate Adoption Through Clear Value Messaging

- *Current global messaging often feels US-centric and fails to resonate in other markets*
- *Universal value statement is missing and teams struggle to articulate one clear sentence that explains the irrefutable value of COREid*
- *Tier-based messaging: enterprise vs. mid-market vs. emerging*
- *Create GTM playbooks for Sales and client-facing materials explaining COREid benefits*
- *Messaging often broad-brush; needs retailer-specific outcomes*
- *"We're having to remarket the core product offering because we made assumptions upfront."*
- *Shift to Outcome-Based Messaging - Replace "how it works" with "what you gain"*
- *"Clients have said you've overcomplicated it with your identity discussions."*

Remove Legal Barriers to Speed Up Activation

- *Trust issues: They perceive Epsilon as non-compliant and doubt our ability to process data legally*
- *Compliance and data handling concerns overshadow product benefits*
- *Geo-specific privacy laws create friction; legal enablement is the biggest unlock*
- *Revalidation required if CoreID wasn't locked in contract*
- *The legal back-and-forth is the most time-consuming part of adoption*
- *"Clients flip out as soon as they see our data privacy agreement… 100 out of 100 times."*
- *"It's not really a question of whether privacy is important or not. It's more a case of: what is the upside to doing this?"*
- *"Legal approvals are a nightmare."*

Proof of Value Delivery

- *Retailers can't prove impact for 80% in-store conversions; need case studies and aggregate benchmarks*
- *What always works is proof points, case studies that quantify impact."*
- *Show wasted spend vs potential uplift if identity is connected*
- *Visualize "wasted spend" vs "proven impact" scenarios*
- *"They either get too much and get overwhelmed… or too little and don't see the value."*
- *"Why do I need CoreID?"*
- *"Proof points and case studies are critical for adoption."*
- *Needs proof points and ROI models to make adoption irrefutable*
- *"Retailers want tangible ROI, not technical detail."*
- *"I just need to articulate what can I do now, what are the limitations, and how does that compare with competitors?"*

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

1.2 Identity as an Enabler, Not the Product

Accelerate Adoption Through Clear Value Messaging

Emerging Pattern
1. Identity is over-emphasised
2. Revenue-first narrative wins

Hypothesis
If we deliver a globally revenue-first narrative and equip sales with tiered collateral, then retailer onboarding will increase, and sales cycles will shorten

Assumption
1. Clear messaging and collateral drive early adoption and reduce sales cycle

Remove Legal Barriers to Speed Up Activation

Emerging Pattern
1. Privacy concerns trigger red flags in 100% of cases

Hypothesis
If we standardise DPAs and provide proactive privacy enablement, then compliance objections will decrease, and onboarding time will reduce significantly

Assumption
1. DPAs and compliance toolkits remove onboarding bottlenecks

Proof of Value Delivery

Emerging Pattern
1. Retailers expect tangible outputs, ROI models, personalisation reports & user journey maps to justify premium pricing and validate the value of identity-driven capabilities

Hypothesis
If we identify and deliver the proof-of-value outputs that can influence retailer decisions, then adoption will accelerate, renewals will strengthen, and GTM conversion rates will improve

Assumption
1. Tangible proof points accelerate adoption and strengthen renewals

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

1.3 Universal Value Proposition & GTM Enablement

CoreID should not be positioned as a standalone product but as a supporting capability that enables outcomes such as revenue generation, personalisation, and omni-channel attribution. Current narrative over-indexes on identity as the hero feature

What is it?

Reposition identity (CoreID) as an enabler of monetisation and personalisation outcomes, not as a standalone product. Shift GTM messaging from technical jargon to business storytelling, emphasising revenue impact, creative capabilities, and omni-channel attribution

Why it matters

- Current messaging focuses too heavily on identity as a feature, which fails to connect with retailer business priorities
- Clients expect tangible outputs to justify premium pricing
- Positioning identity as an enabler ties directly to measurable outcomes, making the value proposition more compelling and globally relevant

> "The only thing that matters to the client is whether or not you're bringing in more revenue."

Expected Outcomes

- Increased Adoption (10% → 40–60%)
- Reduced Sales Cycle Time
- Higher Engagement with ROI and Personalisation Proof Points

Potential Opportunities

1. **Narrative Simplification:** Validate which aspects of identity messaging confuse clients and test simplified, outcome-led narratives
2. **Revenue-First Positioning:** Test and validate messaging that leads with monetisation and attribution benefits rather than identity mechanics
3. **Tiered Messaging by Market Maturity:** Test differentiated narratives for mature vs emerging markets

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

2. Identity Activation & Measurement

RFP Readiness Checklist

Emerging Pattern
Retailers face multiple barriers to CoreID adoption during RFP phases, including:
- Hesitation to share loyalty IDs due to privacy concerns
- Poor website login UX leading to low persistent ID availability
- Fragmented in-store scanning processes limiting offline attribution

Hypothesis
By providing a clear privacy-safe identity framework, then we would be able to accelerate CoreID readiness during RFP evaluations

Assumption
- Retailers have loyalty programs
- Retailers have the ability to track login behaviours
- Retailers' POS systems support loyalty ID capture and can link transactions to digital profiles
- Retailers are willing to invest in training and process alignment for in-store staff

Historical Conditioning & Event Enrichment

Emerging Pattern
- Lack of persistent IDs limits enrichment; lack of enrichment limits data value → chicken-and-egg problem
- Tracking and monitoring stickiness, decay, pollution guardrails

Hypothesis
If we unlock the full value of identity data through accurate matching, historical conditioning, and event enrichment and complement this with advanced measurement capabilities and retailer readiness, we enable retailers to connect fragmented customer signals across channels, devices, and time

Assumption
- It will transform identity from forward-looking to retrospective value closing competitive gaps with person-level attribution and multi-device coverage
- We would see a conversion lift from enriched profiles
- Increase identity resolution (match rate)
- Lack of early due diligence and advisory

Identity Coverage

Emerging Pattern
- Identity coverage gaps in emerging markets like APAC, slowing adoption & scalability

Hypothesis
If we define a clear build vs. buy strategy and execute partnerships while securing online identity signals,
then we will improve identity coverage, higher match rates, attribution & personalisation outcomes that accelerate adoption and revenue growth

Assumption
- We need the right kind of client or third-party data partnerships to link offline IDs to online touchpoints
- Limited identity coverage in Emerging Markets
- Smaller retailers in APAC need enrichment from Epsilon or must provide more data

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

2. Identity Activation & Measurement

If we unlock the full value of identity data through accurate matching, historical conditioning, and event enrichment and complement this with advanced measurement capabilities and retailer readiness, we enable retailers to connect fragmented customer signals across channels, devices, and time

What is it & Why it matters?

CoreID adoption is not just about future-facing identity, it's about unlocking full value across historical, current, and cross-device signals. By combining matching and enrichment with advanced measurement capabilities, we enable retailers to:

- Connect fragmented signals (sessions, loyalty IDs, cookies, email) into persistent identity profiles
- Reattribute historical interactions for accurate ROI benchmarking
- Builds a more complete attribution model that reflects true campaign impact over time
- Event enrichment to add context and behavioural signals for deeper personalisation (smarter targeting)
- Competitors already leverage person-level attribution, creating a competitive gap

This dual approach transforms identity from a static feature into a strategic growth lever, driving trust, adoption, and competitive differentiation. Essentially, it transforms identity from a forward-looking feature into a retrospective value driver, enabling retailers to see the full picture of customer engagement and conversion history

Expected Outcomes

- Enable household-level attribution in select markets
- Personalisation at Scale with richer profiles for targeted experiences
- RFP Readiness: Clear checklist for identity maturity and technical enablement
- Improve cross-device match rate by x%
- Enable household-level attribution in select markets
- Stronger proof points for upsell opportunities

Potential Opportunities

Historical Conditioning & Event Enrichment

- Build enrichment logic to reattribute past conversions and fill gaps in customer journeys
- Incorporate behavioural signals (e.g.browsing patterns, purchase history) for deeper personalisation

Identity Graph & Device Linking

- Mapping persistent IDs across devices
- Implement probabilistic and deterministic matching for multi-device behaviour
- Extend identity graph to household-level attribution

RFP Readiness Checklist

- Early due diligence and advisory:
  - Loyalty program attach rates
  - In-store scanning processes
  - Website login UX and behaviours
- Position CoreID as a compliance-safe, future-proof identity solution

Proof of Value Collateral

- Generate ROI dashboards, case studies, and before/after attribution models
- Demonstrate uplift in match rates, conversion attribution, and personalisation metrics

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

3. Integration Playbook for Emerging Markets (EMEA & APAC)

If we provide low-complexity, privacy-first integration options during onboarding, retailers in emerging markets who are legally cautious and less technical will adopt identity faster

What is it

A set of progressive, lightweight integration methods designed for emerging markets with:
- Strict legal/privacy requirements (GDPR, PDPA, etc.)
- Limited technical capacity (mid-market retailers, lean teams)

Reverse proxy recipes, S2S ID stability SLAs, smart-tag specs, consent/retention templates

Why it matters?

- Accelerates adoption in markets where technical and legal barriers slow identity rollout
- Builds trust with privacy-first architecture and clear consent frameworks
- Unlocks revenue through offsite audience extension and closed-loop measurement

Expected Outcomes

- Time-to-live reduced by x% for mid-market/ Emerging Retailers
- Identity coverage uplift +x% within x days

Potential Opportunities

1. **Progressive onboarding tracks** (Session → Customer ID → CoreID)

2. **Universal tag approach** for low-tech retailers
    1. Retailer drops **one simple tag** across all pages
    2. Our Ops team configures data capture via UI (pulling JS variables, URL params)

3. **Reverse Proxy + Header-Set Cookies**
    1. Retailer sets up reverse proxy so cookies are written in their domain via HTTP headers
    2. Persistent identity without JavaScript constraints

4. **Server-to-Server (S2S) Integration**
    1. Retailer sends event data directly to us with a **stable client-supplied ID** (≥90-day lifetime)
    2. No tags on site

5. **Smart Tags for High-Intent Events**
    1. Lightweight tags only on critical pages (checkout, login)

6. **Self-Serve Validation Plugin** (Already in Scope)
    1. Retailer installs browser plugin to verify tag health and troubleshoot errors

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

3.1 Integration Methods for Emerging Retailers

Universal Tag + UI Configuration

What
- Retailer drops one simple tag across all pages
- Our Ops team configures data capture via UI (pulling JS variables, URL params)

Hypothesis
If retailers can implement a single universal tag and delegate data mapping to our UI, then onboarding complexity will drop significantly, reducing time-to-live by at least x% and increasing adoption among mid-market retailers with limited technical resources

Benefit
- Minimal engineering effort, Ops handles configuration logic, faster go-live
- It will cut integration friction for mid-market retailers

Reverse Proxy + Header-Set Cookies

What
- Retailer sets up reverse proxy so cookies are written in their domain via HTTP headers
- Cookies are set via HTTP headers (server-side), not JavaScript
- Complies with browser restrictions (e.g.ITP, SameSite policies

Hypothesis
If retailers adopt reverse proxy with header-set cookies, then identity persistence will improve (≥90-day cookie lifetime), mitigating browser restrictions and enabling stable CoreID coverage for privacy-compliant markets like EMEA/APAC

Benefit
- Persistent identity without JavaScript constraints; compliant with browser restrictions
- Enables persistent first-party cookies for identity continuity

Server-to-Server (S2S) Integration

What
- Retailer sends event data directly to us with a stable client-supplied ID (≥90-day lifetime)

Hypothesis
If retailers use server-to-server data transfer with a stable client-supplied ID, then onboarding will satisfy privacy concerns while maintaining identity continuity, provided ID lifetimes exceed 90 days, reducing reliance on browser context

Benefit
- No tags on site; privacy-friendly; works for retailers avoiding client-side scripts

Smart Tags for High-Intent Events

What
- Lightweight tags only on critical pages (checkout, login)

Hypothesis
If retailers deploy lightweight tags only on high-intent pages (checkout, login), then we can capture critical identity signals without full-site tagging, accelerating adoption for retailers with strict legal or technical constraints

Benefit
- Capture critical browser signals at checkout/login without full-site tagging

Preferred hierarchy: Reverse Proxy (most stable) → Server-to-Server (supplemented via browser call) → White-label/Site tagging (fallback)

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

3.2 Discovery Insights

Universal Tag + UI Configuration

- *"You give a very simple tag to the client and then within our UI you configure where that tag should be pulling data from, like looking at the referring URL and looking for particular parameters, looking for JavaScript variables"*
- *"instead of the current integration where the client has to put the tags on the website and provide all the data in either a JavaScript data object or on the tag URLs, this would mean that the client doesn't have to do that much preparation of the website"*
- *"Hopefully they can just drop the tag on the page and it'll be the same tag for every single page, and then our operations team would go in and look at the website and say OK, let's pull the data out of here, out of this JavaScript parameter and be able to do that setup for the client."*

Reverse Proxy + Header-Set Cookies

- *"Here's the number one type of integration we should prioritize, which is our tags on the client website."*
- *"The client sets up a reverse proxy, so the calls to our ad server are coming through the client's domain. And we're able to set cookies in their domain using HTTP headers, so it's not JavaScript cookies."*
- *"There's less restrictions. That's the number one priority."*

Server-to-Server (S2S) Integration

- *"Clients… want to have a server-to-server integration and so we don't see the client browser. The client sends us that data and again we've built out a server-to-server integration. It relies on a client-supplied ID. But often even the client doesn't have a stable first-party cookie we can rely on, and so then it becomes difficult."*
- *"We can't set a first-party cookie and the client doesn't have a stable first-party cookie like they only set it for two weeks or something like that and then it becomes difficult to maintain the CoreID for users on that website because the cookies expire and get deleted."*
- *"S2S is privacy-friendly but fragile without stable IDs. Retailers often have short-lived cookies (14 days), creating identity decay. Requires ID governance and minimum lifetime policies."*

Smart Tags for High-Intent Events

- *"If possible, we should get the offline transaction files and the site tagging done as well because then that'll help build out the CoreID for the consumers on that retailer's website."*
- *"Clients rejecting full tagging and preferring minimal integration"*

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

4. Identity Coverage

If we define a clear build vs. buy strategy and execute partnerships while securing online identity signals, then we will improve identity coverage, higher match rates, attribution & personalisation outcomes that accelerate adoption and revenue growth

What is it?

To enable identity everywhere by clarifying the build vs buy strategy for identity capabilities. It involves evaluating partnerships and acquisitions to accelerate identity coverage across emerging markets.

Why it matters

- Emerging markets present infrastructure gaps that slow adoption
- Partnerships like e.g. WINR accelerate offline identity
- A clear build vs buy decision avoids fragmented execution

Expected Outcomes

- Improved Identity coverage across channels *(online + offline)*
- Higher match rates for attribution and personalisation
- Faster time-to-market in emerging regions
- Increased adoption and monetisation opportunities globally

Potential Opportunities

1. **Partnership Evaluation for Offline Anchors:** Assess partnerships for offline identity coverage & validate partner capability to deliver scalable offline anchors and integration feasibility

2. **Feasibility for Emerging Markets**: Explore buying identity capabilities where building is slow or impractical > Model cost-benefit scenarios for build vs buy in APAC, LATAM, and other growth regions

3. **Online Identity Strategy**: Secure hashed emails and match events to complement offline anchors > Test match rates and attribution accuracy when online and offline data are combined

4. **Integration Framework for Identity Coverage**: Develop workflows to unify identity signals across channels > Measure impact on match rates and campaign performance after integration

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

4. Leveraging Our Capabilities

If we create a clear onboarding framework post-integration to ensure adoption and utilisation of advanced capabilities, positioning Epsilon as the trusted leader in identity-powered retail media

What is it?

We want to build confidence in Epsilon's identity-powered ecosystem by enabling retailers to fully leverage our advanced capabilities such as unified audience segmentation, richer personalisation, and improved targeting accuracy through seamless adoption and onboarding.

Why it matters

- Retailers can activate advanced features like unified audience segmentation, richer personalisation, and monetisation
- Without leveraging these capabilities, identity remains an internal feature rather than a market differentiator
- Retailers can drive measurable ROI through identity-driven solutions

Expected Outcomes

- New client wins in targeted global markets
- Increased offsite revenue streams
- Higher renewal rates and upsell opportunities
- Improved ROAS and campaign performance metrics

Potential Opportunities

1. **Activate Advanced Capabilities:** Ensure retailers not only adopt COREid and FPC-enabled tagging but also activate advanced features post-integration such as audience expansion, omni-channel attribution, and personalisation through a clear, milestone-driven onboarding process

2. **Educate & Create Awareness:** Develop value-driven messaging that clearly articulates the value and benefits beyond the integration of identity to demonstrate the impact of our advance capabilities

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

Identity Everywhere

Epsilon Opportunity: GTM Adoption Strategy
Product Lead: Katrina
Engineering Lead: TBA

Description: Drive Retailer Epsilon Tag adoption / COREid based on the value of increased measurement, campaign optimisations, and audience opportunities

Initiative	Hypothesis	What problem (s) are we solving?	Who is the customer?	What value do we create?	What are the measurable outcomes
Accelerate Adoption Through Clear Value Messaging	If we deliver a globally revenue-first narrative and equip sales with tiered collateral, then retailer onboarding will increase, and sales cycles will shorten	• Retailers don't see COREid as essential • Fragmented messaging • Unclear value • Identity perceived as complex → low adoption • *9/101 retailers are currently tagged*	• Internal sales teams **Regional Gaps:** Strong in US/UK/FR; APAC/EU emerging	• Clear, globally resonant narrative • Tiered messaging by market maturity • Collateral (battle cards, ROI toolkit)	• Increase COREid adoption among eligible retailers from 10% > 40/60% in 12 MTH • Reduced sales cycle time • Higher onboarding rates in APAC/EU
Legal & Privacy Simplification	If we standardise DPAs and provide proactive privacy enablement, then compliance objections will decrease and reduce onboarding time	• Missing DPAs in contracts • Privacy objections • Legal delays block deals • Brand trust issues (enterprise distrust)	• Retailer legal teams • Procurement • Strict governance markets (EU/APAC)	• Standardised Contracts with DPAs • Develop Privacy Assurance Toolkit for objection handling • Regional compliance playbooks • Proactive legal enablement	• % contracts embedded with DPAs (SOW/MSA) • Faster legal approvals • Reduced onboarding cycle time • Increased trust and adoption

© 2024 Epsilon Data Management, LLC. All rights reserved. Proprietary and confidential.

Identity Everywhere

Initiative	Hypothesis	What problem (s) are we solving?	Who is the customer?	What value do we create?	What are the measurable outcomes
Identity Activation & Measurement	If we unlock the full value of identity data through accurate matching, historical conditioning, and event enrichment and complement this with advanced measurement capabilities and retailer readiness, we enable retailers to connect fragmented customer signals across channels, devices, and time	• Retailers struggle with fragmented identity signals across sessions, devices, and channels, limiting attribution accuracy • Current models rely heavily on session-based data, creating blind spots in customer journeys • Retailers can't prove impact • Current attribution models only look forward from the point of integration • No historical conditioning exists today for onsite • Retailers often have disconnected signals that don't link together	• CoreID/ FCP Tagged Integrated Retailers • Enterprise retailers with onsite and offsite advertising capabilities • Retailers with loyalty programs and digital commerce platforms seeking advanced personalisation and measurement	• Advanced measurement capabilities • Connect fragmented signals (session IDs, loyalty IDs, cookies) into persistent profiles • Reattribute past interactions for accurate ROI benchmarking • Enable person-based and household-level attribution across devices • Unlock advanced targeting and personalisation capabilities • Stronger ROI Proof Points creating credible benchmarks	• Increase identity resolution by X% (match rate) • Reduce untracked conversions by Y% (Accuracy) • Achieve Z% uplift in multi-device attribution (cross-device coverage) • Demonstrate conversion lift from enriched profiles. • Complete RFP readiness checklist for top-tier retailers (loyalty attach rate, login UX, data compliance).
Integration Playbook for Emerging Markets	If we provide low-complexity, privacy-first integration options during onboarding, retailers in emerging markets who are legally cautious and less technical will adopt identity faster	• Some retailers lack basic infrastructure (cookie consent mechanisms) making CoreID implementation impossible until prerequisites are met • Rework and delays arise because minimum prerequisites (e.g.FPC persistence, CMP wiring, stable identifiers) aren't uniformly established before launch • Without persistent identity, match rates remain low, limiting measurable ROI and stalling offsite use cases	• Retailer technical teams • Epsilon onboarding (CIE/TIE) and Client Success teams who own implementation, support, and time-to-value	• Reduced complexity & faster time-to-value via a clear, prescriptive readiness checklist and tooling • Higher CoreID coverage & persistence (privacy-compliant) that enables offsite audience extension and closed-loop attribution • Predictable onboarding with fewer escalations and lower support burden for mid-market/lower-tech retailers • Explicit steps that make "CoreID implementation possible" (even where baseline infrastructure was missing)	• % of new onboardings with FPC enabled at launch • % retailers meeting "CoreID Readiness" within x days • Time-to-live reduction • Rework (post-launch fixes) reduction • ID persistence

Identity Everywhere

Initiative	Hypothesis	What problem (s) are we solving?	Who is the customer?	What value do we create?	What are the measurable outcomes
Identity Coverage	If we define a clear build vs buy strategy and execute partnerships while securing online hashed emails and match events, then we will improve identity coverage across channels, higher match rates, attribution & personalisation outcomes	• Retailer Readiness is uneven • Slow adoption and scalability of CoreID are due to our current gaps in identity coverage that prevents Epsilon from scaling offsite retail media and advanced personalisation in emerging markets (APAC, MENA, EU).	• Emerging Markets like APAC	**Build internally**: • Gives full control and consistency across markets **Buy or partner**: • Accelerates identity coverage in strategic markets • Leverages third-party data sources (e.g WINR, Lotame) to fill gaps • Reduces friction for onboarding retailers who cannot support full integration	• Build vs buy strategy • Complete cost-benefit analysis • Achieve x% coverage of offline identity signals in priority markets • Reach x% match accuracy when combining online and offline identity signals within **x** months • Higher match rates for attribution and personalisation
Expand Publisher Partnerships	If we build a publisher network and strategic partnerships beyond RMNs, then retailers can monetise first-party data at scale, reach net-new audiences, and improve identity match rates, driving incremental revenue	• Fragmented RMN ecosystems limit reach and scale. • Retailers lack offsite activation capabilities tied to identity • Emerging markets have weak identity graphs and low awareness of monetisation opportunities	• Retailers • Brand seeking offsite reach	• Net-new demand by extending retailer audiences beyond their site • Enable retailers to activate and sell audiences via clean rooms and publisher integrations • Improve match rates through deterministic publisher signals	• # of publisher integrations live • Net-new audience reach uplift • Boost deterministic matches (emerging markets first) • Match rate improvement from publisher signals

Identity Everywhere

Initiative	Hypothesis	What problem (s) are we solving?	Who is the customer?	What value do we create?	What are the measurable outcomes
Leveraging Our Capabilities	If we create a clear onboarding framework post-integration to ensure adoption and utilisation of advanced capabilities, positioning Epsilon as the trusted leader in identity-powered retail media	• Retailers are unable to unlock Epsilon's advanced capabilities without the adoption of COREid and FPC-enabled tagging remains low. • Even when integration occurs, there is no structured onboarding framework to guide retailers in activating these capabilities effectively	• Retailers with FPC Enabled • Retailers using COREid	• Builds confidence in Epsilon's ecosystem, critical for leveraging advanced capabilities • Ensure that integrated retailers can unlock measurable ROI, campaign optimisation and monetisation opportunities • Onsite attribution based on users *(dev work underway - probably in Q2)* • Once tagged and we complete Instore Attribution, this unlock audience targeting (offsite audience ids)	• Established an onboarding adoption framework • x% of integrated retailers activate at least x advanced capabilities within x months post-integration • Higher renewal rates and upsell opportunities
